

STOWABLE SPIRAL STAIRCASE SYSTEM FOR OVERHEAD SPACE ACCESS

Abstract

A staircase system (2) includes a rail element (40) and multiple stair elements (42). Baluster elements (44) are coupled to the rail element (40) and to the stair elements (42). A center support system (46) is coupled to and supports the rail element (40) and the stair elements (42). The center support system (46) has a stowed state and a deployed state.
